

API de Consultas

El API de Consultas te permite validar el estado de las órdenes generadas junto con sus transacciones.

Para integrar con el API de Consultas, apunta tus peticiones a las siguientes URLs de acuerdo con tu ambiente.

URL

- Pruebas: <https://sandbox.api.payulatam.com/reports-api/4.0/service.cgi>
- Producción: <https://api.payulatam.com/reports-api/4.0/service.cgi>

Métodos disponibles

El API de Consultas incluye los siguientes métodos:

- [Consultar por Identificador de la orden](#)
- [Consultar por Identificador de la transacción](#)
- [Consultar por Identificador de la referencia](#)
- [Ping](#)

Consultar por Identificador de la orden

Order Id es un valor generado por PayU para identificar todas las transacciones generadas en una solicitud de pago realizada por tu cliente. Puedes utilizar el comando `ORDER_DETAIL` para consultar el estado de una orden por su identificador.

Los siguientes son los cuerpos de la petición y la respuesta para esta operación.

JSON

Ejemplo petición:

```
{
  "test": false,
  "language": "en",
  "command": "ORDER_DETAIL",
  "merchant": {
    "apiLogin": "pRRXK018ikMmt9u",
    "apiKey": "4Vj8eK4rIoUd272L48hsrarnUA"
  }
}
```

```

    },
    "details": {
      "orderId": 857695047
    }
  }
}

```

Ejemplo respuesta:

```

Consultar por Identificador de la transacción_

Transaction Id es un valor generado por PayU para identificar una transacción generada para una orden. Puedes utilizar el comando `TRANSACTION_RESPONSE_DETAIL` para consultar la información de una transacción.

Los siguientes son los cuerpos de la petición y la respuesta para esta operación.

JSON

Ejemplo petición:

```

{
  "test": false,
  "language": "en",
  "command": "TRANSACTION_RESPONSE_DETAIL",
  "merchant": {
    "apiLogin": "pRRXK018ikMmt9u",
    "apiKey": "4Vj8eK4rloUd272L48hsrarnUA"
  },
  "details": {
    "transactionId": "546e0fe9-8076-46b5-9f73-622c5a12f5cb"
  }
}

```

Ejemplo respuesta:

```

{

```

```

"code": "SUCCESS",
"error": null,
"result": {
  "payload": {
    "state": "APPROVED",
    "paymentNetworkResponseCode": "000",
    "paymentNetworkResponseErrorMessage": null,
    "trazabilityCode": "77821",
    "authorizationCode": "170921",
    "pendingReason": null,
    "responseCode": "APPROVED",
    "errorCode": null,
    "responseMessage": "Aprobado y completado con exito",
    "transactionDate": null,
    "transactionTime": null,
    "operationDate": 1620069958670,
    "extraParameters": null
  }
}
}

```

XML

Ejemplo petición:

```

<request>
  <language>en</language>
  <command>TRANSACTION_RESPONSE_DETAIL</command>
  <merchant>
    <apiLogin>pRRXK018ikMmt9u</apiLogin>
    <apiKey>4Vj8eK4rloUd272L48hsrarnUA</apiKey>
  </merchant>
  <details class="java.util.HashMap">
    <entry>
      <string>transactionId</string>
      <object class="java.lang.String">546e0fe9-8076-46b5-9f73-622c5a12f5cb</object>
    </entry>
  </details>
  <isTest>false</isTest>
</request>

```

Ejemplo respuesta:

```

<reportingResponse>
  <code>SUCCESS</code>
  <result>
    <payload class="transactionResponse">
      <state>APPROVED</state>
      <paymentNetworkResponseCode>000</paymentNetworkResponseCode>
      <trazabilityCode>77821</trazabilityCode>
      <authorizationCode>170921</authorizationCode>
      <responseCode>APPROVED</responseCode>
      <responseMessage>Aprobado y completado con exito</responseMessage>
    </payload>
  </result>
</reportingResponse>

```

```
<operationDate>2021-05-03T14:25:58</operationDate>
</payload>
</result>
</reportingResponse>
```

Consultar por Identificador de la referencia

Reference Id es un valor generado por tu comercio para identificar una orden. Puedes utilizar el comando `ORDER_DETAIL_BY_REFERENCE_CODE` para consultar el estado de una orden por tu propio identificador (Referencia). Los siguientes son los cuerpos de la petición y la respuesta para este método.

JSON

Ejemplo petición:

```
{
  "test": false,
  "language": "en",
  "command": "ORDER_DETAIL_BY_REFERENCE_CODE",
  "merchant": {
    "apiLogin": "pRRXK0l8ikMmt9u",
    "apiKey": "4Vj8eK4rloUd272L48hsrarnUA"
  },
  "details": {
    "referenceCode": "HP14015317573744"
  }
}
```

Ejemplo respuesta:

```
{
  "code": "SUCCESS",
  "error": null,
  "result": {
    "payload": [
      {
        "id": 844427581,

Ping

El método `PING` te permite verificar la conexión con nuestra plataforma. Los siguientes son los cuerpos de la petición y la respuesta para este método.

JSON

Ejemplo petición:

```
{
  "test": false,
  "language": "en",
  "command": "PING",
  "merchant": {
    "apiLogin": "pRRXK018ikMmt9u",
    "apiKey": "4Vj8eK4rloUd272L48hsrarnUA"
  }
}
```

Ejemplo respuesta:

```
{
  "code": "SUCCESS",
  "error": null,
  "result": {
    "payload": "ping"
  }
}
```

XML

Ejemplo petición:

```
<request>
  <language>en</language>
  <command>PING</command>
  <merchant>
    <apiLogin>pRRXK018ikMmt9u</apiLogin>
    <apiKey>4Vj8eK4rloUd272L48hsrarnUA</apiKey>
  </merchant>
  <isTest>false</isTest>
</request>
```

Ejemplo respuesta:

```
<reportingResponse>
  <code>SUCCESS</code>
  <result>
    <payload class="string">ping</payload>
  </result>
</reportingResponse>
```
